Instant and Accurate Profile & Job Matching

One of the government agencies in Thailand aims to enhance Thai industries' competitiveness in the global market and improve workers in the industry sector with a good working attitude, productivity skills and adaptability to industrial changes in the future.

Our AI Assistant that combine Machine Learning and Generative AI to understand CVs and match the profile of workers with job specifications in the industry sector.

A photograph showing a person's hands holding a smartphone. The phone's screen displays a picture of a car with significant damage to its front end. In the background, another person's hand is visible, pointing towards the phone's screen. The image is slightly blurred, focusing on the phone and the damage it shows.

AI Case Study >

Damage Detection of Cars and Repair Cost Estimation

Claiming Insurance for damaged vehicles involve paperwork and inspection that consumes time.

An insurance company in Thailand selected Avalant to solve this problem.

Our AI platform estimates the repair cost of damages from pictures of the damaged areas through machine learning using the past claims images and data for model training.
